

Task 2

Using unix system calls of I/O **not** standard i/o library of c

We want to make a program that read data from standard input and write it in file named "file1.txt"

The input data will be in the following pattern :

Any words..... * **any words.....** * any words..... #

And then we make a processing on "file1.txt" that we will read words between the two asterisk (in red color) in another file called "file2.txt"

then we write to standard output all data from "file2.txt"
